Technical Data Sheet

BLU-MIN® ZINC-COARSE

ZINC SULFATE MONOHYDRATE

FEED GRADE

For mixing purposes only. Do not feed undiluted.

Zinc is an essential element in animal nutrition. Zinc is a component of various enzyme systems, which are involved with regulation of such functions as respiration, cellular development, digestion and reproduction.

Some typical zinc deficiency symptoms in animals include reduced conception rate, reduced growth rate, foot rot and severe dermatitis.

Zinc sulfate is one of the forms of zinc most commonly used in animal feed.
